

Industrial-use fully automated rice washing machine.

Ricemini RM-401AG-CE

The new model compatible with CE is released!

It is the model for overseas markets of the best seller (RM-401AG) of professional-use automatic washing rice machines.

Ease of control

All you have to do is set the inner container and push the start button. Everything else is fully automatic!

Even from the very first day, you can become a professional rice-washing master.

Saving water

Different from Water pressure typed machine. Agitation type is structured to save water

Operability

Very easy! Beginners can use it. Anybody can always wash up rice as same

Ease of cleaning

Cleaning after usage is made simple and is easily done through a conveniently placed maintenance window. In addition, cleaning can be done more thoroughly since the tank is removable.

The first ever Eco Friendly model!! Abides by the RoHS Directive.

The first ever fully automated rice-washing model that meets RoHS specifications. With the environment in mind, this model was manufactured in accordance to the RoHS Directive and restricts the usage of the 6 harmful substances as regulated. The usage of vinyl chloride was also eliminated from the water flow pipelines.

Ricemini RM-401AG-CE

Further enhanced to maximize efficiency and cost / labor effectiveness!

Small size & Easy to use

Compact size can be placed in a narrow space. Equipped with the reservoir. Easy to put rice in!

Agitation typed washing rice machine

Strong against water pressure. Washing rice clean

Water filter installation

A specialized water filter can now be installed directly to the washing machine as an option.

(As per our specifications)

Accommodates pre-washed rice

Small rice particles that cling to the pre-washed rice can be quickly removed by a rinse option, thus enabling the most appropriate conditions to perform with the rice-cooker.

Low energy consumption

Top class ranking in low energy usage for aspiration type fully automated rice washing machines.

Reduction of water usage

Through improvements made to the washing paddles, not only was the washing function improved, but the water usage was decreased as well. (5% Reduction)

System to flow rice

Weighing rice, and flow it automatically to a tank of washing by the air. Designed to save electric power by flowing rice little by little
